RESEARCH OPPORTUNITIES

DOMESTIC RESEARCH COMPONENT

Research opportunities have positive effects on achievement, grades, persistence, and aspirations for advanced degrees. Such opportunities provide disciplinary focus and outcomes that foster retention and bring dimension to applied as well as theoretical work. Working with an intergenerational team of faculty, graduate students, staff scientists, and undergraduates personalizes and expands the educational experience and direct contact with those who expect and encourage excellence keeps students excited about their intellectual lives and futures in STEM.

INTERNATIONAL RESEARCH

Partnering with existing faculty research collaborations, research centers throughout the UC system, and the REU's have enabled CAMP students to experience research in the global context. Students participated in research in South and Central America, Europe, Antarctica, the UK and Asia, affording a global perspective and insights into emerging technologies and interdisciplinary collaborations.
